

# What's in a seed bomb?

*Dalea purpurea*  
(Purple Prairie Clover)  
This flower attracts 10 different types of bees.

*Coreopsis palmata*  
(Prairie Coreopsis)  
Several mammals eat the foliage from this flower, including rabbits and deer.

*Ratibida pinnata*  
(Gray-headed Coneflower)  
Seeds of this flower are eaten by Goldfinches.

*Liatris punctata*  
(Dotted Blazing Star)  
Adult Monarch Butterflies love the nectar from these flowers.

*Helianthus pauciflorus*  
(Prairie Sunflower)  
The roots are eaten by gophers.

*Asclepias tuberosa*  
(Butterfly Milkweed)  
Monarch Butterfly caterpillars consume the foliage.

*Asclepias verticillata*  
(Whorled Milkweed)  
Milkweed leaves are the only food of the Monarch Butterfly larva.

*Tradescantia ohioensis*  
(Ohio Spiderwort)  
This flower changes from blue to violet when air pollution is present.

*Rudbeckia hirta*  
(Black-Eyed Susan)  
Most herbivores won't eat the leaves because they are too coarse and possibly poisonous.

*Monarda fistulosa*  
(Wild Bergamot)  
The Ruby Throated Hummingbird drinks from these flowers.

*Chamaecrista fasciculata*  
(Partridge Pea)  
These flowers are usually pollinated by insects but can sometimes self-pollinate.

*Agastache foeniculum*  
(Anise Hyssop)  
The anise scent of this flower deters herbivores and some insects.
